		General Information				
		For blank fields, use a carriage return				
		County of Residence, field 25, must contain the four digit county code. If out-of-state, enter NONR.				
		All alpha characters should be in capital letters (A-Z).				
		Numeric fields aren't zero filled.				
		Refer to the "Acceptable Values" column for clarification of acceptable field values.				
		Negative amounts will have a leading minus sign.				
		Check boxes, an X indicates Yes, nothing is No (see Acceptable Values Column)				
		Only whole dollar amounts should be entered on the MO-1040P return. When entering amounts (such as W-2s) where multiple amounts may need to be entered as a total, add the amounts together then round and enter.				
		Any fields which can be negative are noted above. The picture clause should have a S (example: PIC S9(9)). A negative sign must be included in the field (example: -90, -1000) and precede the first number in the field.

		The intended use of the Description Column is to cross reference the barcode field number, form line number, and form line wording. The description may not be exact due to limitations of space. Please refer to the tax form and instructions for the exact line wording.				
		Trailer: The last field in the barcode data stream is the trailer. The trailer is used to indicate the end of data has been reached. A static String of "**EOD**" is used as the trailer value. If a trailer is not found, this indicates a data overflow condition has occurred.				
		Header Information: There is information generic to all barcodes that should be placed first in the barcode data stream. The first six fields in the barcode comprise the official header. The fields in the official header are variable length and therefore can contain as much or as little data as is necessary. This information must be consistent among all barcodes and is defined below.				
		(Note: The symbol <CR> is used to represent a single carriage return character.)				
		Header Version Number: will be incremented each time the standards group alters the physical structure of the barcodes that were created using multiple header formats. This value is static for all barcodes and is currently T1.				
		Developer Code: A four-digit code used to identify the Software Developer whose application produced the barcode. The purpose of this field is to allow forms to be traced to the vendor producing them.				
		Jurisdiction: An alphanumeric identifier indicating the taxing jurisdiction. Use the US Postal Service's official state abbreviations.				
		Description: An alphanumeric identifier used to describe the form being processed. The identifier can be used to route the barcode information to the correct system for further processing. For Missouri, use MO1040P.				
		Specification Version: A number that identifies the version of the specifications used to produce the form barcode. These specifications are provided by the jurisdiction processing the form and describe the data layout in the barcode. Draft versions of the specifications are not assigned version numbers. The final version shall be "0", revision thereafter will increase numerically.				
		Software/Form Version: A vendor defined version number that reflects the software and form revision used to produce the barcode.				
		Example Header Version Number "T1" Developer Code: "9999" Jurisdiction: "MO" Description: "MO1040P" Specification Version: "0" Software/Form Version: "1.0"				
		Raw Header T1<CR>9999<CR>MO<CR>MO1040P<CR>0<CR>1.0<CR>
